ABSTRACT

This study aims to determine the influence of the use of image media on the emotional intelligence of children aged 5–6 years. This research is quantitative research using the quasi-experimental method. The design used is a pre-test post-test control group design. This study used a control class and an experimental class. The population of this study was 24 children with purposive sampling techniques, so a sample of 24 children was obtained, consisting of 12 children for the experimental group and 12 children for the control group. The data collection technique uses observation techniques in the form of checklists with data analysis techniques using a statistical analysis T-test with an Independent-Sample T-test. The results showed that there was an influence of the use of image media on early childhood emotional intelligence (Sig 0.00 < 0.05).
